For information about the printer and project files, look at the model site - **ENDER 3 NG**.

E3NG calibration cube V2 is designed to help you optimally calibrate and test your printer for printing the Ender 3 NG parts.

Tolerances on the cube are the same as in the printer design.

FEATURES (follow the pictures):

- 30 x 30 x 30 mm cube.
- ENG logo.
- Big enough areas to see wall and top surface quality and ringing/ghosting.
- Holes to test fit M5 and M3 threaded heat set inserts.
- 45° overhangs.
- Hole to test fit LM8LUU and 8 mm linear rod (should be tight/loose enough to press fit).
- Hole bridging test.
- Up to 24 mm bridges.

If you want to support the project, you can [get me a coffee](#).
