This is a bicycle tire lever created by Piotr Zbierajewski. Besides being a normal lever it has also 10 mm wrench for those few tensioners which still can be found in the bikes, as well as it has a spoke hook.

It has been created with PETG in mind since it is a much more durable material.

The tool was also created with ergonomics in mind - its profile is very comfortable to hold and to work with when putting on/off the tube or tire.

PLEASE hit that "like" button if you like the model :). And please leave a comment or even share photos of your prints :).

CHANGELOG:

v. 1.0 - Original version.

Print instructions

The setup was created for PrusaSlicer 2.3.0 - beta 3.
