A Remix of Tinkr3d's great pi camera mount for the Prusa Mini.

I realized my Pi Camera was raised about 2mm at the sensor, which made it impossible to fit in the original design. This design should now take this kind of Pi Camera variation into account. It's a little bit thicker than the original sleek design, but does the job.

The small half-circle cable relief part is meant to be fixated with a small zip-tie around the cable.

Happy Printing!
