Attach your iPhone to any desk or shelves with this dock made for the Apple Magsafe charger.

Idea

It's perfect for the upcoming StandBy mode for iOS. I had the idea for this model when I saw the last Keynote, I wanted my phone floating above my desk and facing a little up. The dock is also perfect for next to your bed or your kitchen, attached to a shelf or a night table.

It currently works for any plank between 12 and 20mm thick. I am working on adding more sizes.

Printing instructions

I recommend printing at 0.2mm, with the back on the plate (see screenshot), it should work without supports but I added a few on the screw hole just in case. I also recommend adding a brim for stability and increasing the quality to 0.1mm starting from 43.7mm and above for the last surface.

Want something more ?

I also designed a free standing, easy to print version available [here](#).

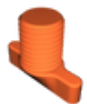

Buy me a coffee

If you like my work, you can [buy me a coffee](#). Appreciated !
