Summary

Ring adaptor for nesco dehydrator to work with 5 gallon buckets

[3D Printers](#) > [Accessories](#)

Tags: [5](#) [bucket](#) [nesco](#) [dehydrator](#) [gallon](#)

Nesco dehydrator adaptor for 5 gallon buckets. Also has a siphon tube to help warm air circulated. Originally designed to help with drying shoes. Siphon will go through center tube of spools of filament as well.

All pieces can be printed without supports. The ring is 6 pieces that glue together and will fit on standard size printer. I printed in PETG.

Down tube mount requires hole drilling after taking the bottom plate off of the dehydrator. I used heat set threads for the mount but may not be necessary. Siphon bottom slides up and down to adjust for bucket depth.
