## The Intent

I spend a lot of my time using either speakers or in-ear monitors, but I like having my “big” headphones near by. I could never find a solution for keeping them on or around my desk. I liked the idea of hanging them off the side, but then I needed to worry about the cable being tangled when my desk goes from sitting to standing.

That's when I realized the Ikea shelf I had above my desk would be a great place to hold the headphones, so I mocked up the Granhult end piece and Bergshult shelf to make a piece that would fit around and hang on to the headphones and cable separately.

## Design Goals

- Be able to print on an Ender 3 v2 or similar printer.
- Use as little filament as possible.
- Simple enough that anyone could just grab the .stl and go to town with it.

## Printing

Make sure it's laying on the side.

## Model files
