### Summary

A tube to extend the height of the Esperanza EKD002 without having to cut off the mesh of the included discs.

Tags: [filamentdrybox](#) [dehydrator](#)

Found the original by Nick Nissen and figured I'd rather print it in one piece as a bit of a test of my printer. I printed it in PETG as I suspect that's probably for the best since this is a device that will generate heat. I had to add some tape partway through the print as mine started to warp a bit, layer height of 0.3mm
