Please see the assembly instructions photo! No supports required!

This is a flashlight diffuser that distributes the light radially and downward to maximize the usage of the light through the diffuser. There is some assembly required using a glue stick, aluminum foil, and a knife. Depending on your 3-D printer, you may need to scale the models a bit to get the lid to snap into the body reliably.

I print these out of PETG using a 0.4mm nozzle with 0.2mm layer height. Try as many colors as you can!

Make a glow-in-the-dark diffuser and set the flashlight to lightning/beacon mode for maximum fun!
