Summary

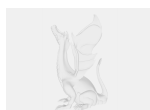

Quadcopter feet, made for a yeet mule but should work with any 22/23 motor and frame.

These were somewhat of an accident. Originally I made peace signs, but after printing a test foot I realized that in short order the outside finger would remove itself on a hard landing and turn it into a middle finger. At the same time the FAA was moving into its campaign to sell the skies to amazon, so it seemed fitting. Never got around to putting them out there, so here they are now that the impending doom is around the corner. Couldn't find the original peace signs with a quick look, I may have just overwritten them. If I ever find I will up them. Enjoy.
