updated 29. 6. 2023 | published 29. 6. 2023

### Summary

Small rain guard to cover small bird feeders. 9" or 228 mm diameter. Two parts. Use 3 M4 bolts to connect.

[Household](#) > [Outdoor & Garden](#)

This cover will keep most of the rain out of a hummingbird feeder or other type of small bird feeder. Print the uploaded STL file twice, connect the two parts with three M4 bolts and nuts. I printed in PETG. Has attachment points on the top and bottom to hang from a hook above, and attach the bird feeder from below. I sprayed on a coating of UV resistant spray, hopefully will last a few years in the sun, but certainly optional.

Diameter: 9" / 228 mm
