## Summary

An extended version of @sdgsean's Nespresso Vertuo Capsule Pod Dispenser

[Household](#) > [Kitchen](#)

Tags: [stand](#)

## General

The goal here was to make it large enough that you can put the **Nespresso Next** machine on top of it. I was trying to solve two problems- To find a place to store my pods and something to lift the device so that I can insert my thermos underneath the machine and have it deliver the goods directly into my thermos.

## Print

Definitely take advantage of PrusaSlicer 2.6 Cut Tool. You'll pretty much need it unless you have a really large print bed. When you use cut, make sure to add **Connectors** to attach the pieces together. If you do the connector sizes just right and your tolerances well, you can technically get away with not needing any glue. (I still recommend glueing for stability).

These take quite some time to print so I recommend doing it with a large nozzle and large layers to speed up the time.
