I liked the dial from Alex97's post, but I felt it was missing something when I used it; It feels more natural to have a pad on the bottom that you can click if you're spinning the knob with one finger.

I also modified it to taper the inside diameter, hoping to make it easier to fit on. I'm not sure it changed much, haha, but it does work fine :)

the one I printed uses wood filament if you're curious, but, use whatever you want for yours.
