### Voron V0.2 R1 Mesh Skirts!

**This will only fit the R1 Version as the skirts are 2mm taller.**

I've placed them on the V0 build plate so should print as they are with no adjustments required. just slicing needs to be done for you to print.

you will need to print 2 lots of the side skirts and 1 lot of the rest to complete the set.

print the standard R1 feet and your good to go!

### UPDATE

Upon special request i have added the two front skirts that now have the Voron Logo integrated into them. (**V1** version)

Also added a new version that has the Voron Hex for those who want the full Logo. (**V2** Version)

Now added One Piece Headless Skirt!

Print with the usual Voron spec plus some hocus pocus for the mesh!

This will guide you through setting the skirts up in your slicer.  
the specific time for slicer settings starts from 4:52 in the video.

Happy printing!

Don't forget to upload a make of this!
