### Summary

A simple container to protect a nasal spray bottle from light and accidental activation.

Someone I know has need of a nasal spray medication that they must carry with them. It's expensive, and comes with a pump. It has to be protected from light. Worse, it would accidentally trigger when in their pocket. They asked if I could design a container to prevent both things.

I've included S.T.E.P. files so you can modify as needed.
