## Summary

Angled bases for One+ Tool Holder for Ryobi Link

[Hobby & Makers](#) > [Organizers](#)

These are 15 and 25 degree angled bases for my **ONE+ Tool Holder for Ryobi Link**.

The threaded portion requires at least 0.20 layer height. My .3mf files include a modifier to print height 0-8mm at 0.20 mm layer height and the rest of the model at 0.30mm. I found this a better option than printing with supports.
