Summary

Especially if you work with a AMS from bambu lab

I have already used cardboard spools but this is only if I have to print 1 color.

Ordered this brand because I needed this exact color for a multicolor print. Spools of R3D are Ø195 so this already didn't fit. (I made the outside diameter 200mm)

the spool was also not 100% round.

So I didn't trust it when I had to do 600 color changes.

I have made clips that the ring does not come off the spool during printing.
