Printed without top/bottom layers and honeycomb to match the stand.

Be sure to adjust the density to match whatever look you're going for. Mine are 10%. I highly recommend printing one at something like 4mm Z-height before going the full monty. These print loose enough to easily mate, but I've added CA glue to mine to make everything rigid. Mine are 230mm tall, but could easily be bigger if the capacity is available.
