Needed the gasket that seals between the headlight and Fairing of my '89 TransAlp. NLA from Mother Honda so I made my own. Will probably work/fit on other bikes that use the standard 5x7 headlight.

Printed in TPU for durability and flexibility, the settings below seem to be a good compromise between the two. Prints in about 2 hours.

3 each top and bottom layers

.3 layer height

2 perimeters

10% rectilinear

Enjoy!
