Fits **Hatsan TactAir** PCP Inline Universal Air Filter for Portable PCP Compressors.

I really love these little compressors but you absolutely need to use an additional filter inline, as so much moisture is present. Just print it, and fill the inside with blue indicating silica gel, preferable the rechargeable kind and you've got a hell of a moisture filter!

If you have any questions please let me know.

NOTE: NEVER ALLOW silica gel to come in direct contact with anodized aluminum, a chemical reaction will take place over time and weaken the integrity of the filter. Once it's weakened, you have a high pressure air explosive that can seriously hurt you! This is the main reason I designed this little canister to make it safe to use silica gel.
