Summary

A remix that adds holders for Wago holders to the fan bracket to limit the amount of soldering needed. For version 1!

Remix is made for the bento box version 1 since version 2 was not available when I ordered the magnets and stuff.

This remix adds Wago connector holders to the fan bracket and moved the fan cable hole to the right side of the bento box since it was too tight on the other side. The fan cables are now supposed to go in the groove in the back of the fan bracket.

There is also a plug for the existing cable channel. Just print and glue it in place.

I think I had to shrink the plug (95%) to make it fit the hole in the previous print.

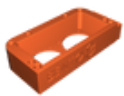

This remix is based on

BentoBox v2.0 Carbon filter for Bambu Lab X1C, enclosed P1P & Voron Trident
