A NEW AND IMPROVED VERSION (V3) IS AVAILABLE HERE:

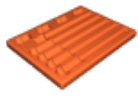

<https://www.printables.com/model/533469-mk4-nextruderv6-nozzle-tray-v3>

Updated (enlarged) pocket sizes for the v6 nozzles.
Updated the locking lids to function also with PLA.

For some people, the tabs on the lid seem to fit too tightly when printing with PETG.

No need to print again, just warm it up with a hot air gun and bend them outward slightly.
