This measuring spoon is designed to be a simple print. It has a flat bottom with the handle placed at the lowest part of the spoon. This design makes it easy to place the spoon on the kitchen counter without spilling the contents. Which may be useful for prepping.

Print with high infill % or a higher number of top layers for a smooth top surface. Ironing may be useful, but it severely prolongs printing time and, in my case, muddled up the numbers and produced other printing defects. So I don't recommend it.
