Vehicle from the game Borderlands 2, adapted for printing as multi-part model kit.

Intended for 1/72 scale and smaller. The solid shape with no real windows or interior would probably look awkward on a large model, and its low-poly nature wouldn't do it many favors either.

I have also made a turret in case you intend to use the vehicle at a different scale or just don't want to man the hatch.

Print instructions

Some thin bits are intended to be made out of wire. You can also attach wire cables between the gun and the turret.
