Redesigned 3DDIY's Ryobi Glue Gun Holder in FreeCAD to be used with RostaP's Honeycomb storage wall.

I kept the 3 screw holes but that's probably overkill and you can just pick two.

In addition to this part you'll need

- 2x m4x20 socket head bolts
- 2x "insert M4" from the original HWS package (or checkout my [connector package](#))

Features:

- Redesigned screw holes with correct angle and spacing to be used with the 4mm connectors.
- Added chamfers edges for easier printing and filets to the tool surfaces to also help printing and provide a nice feel.

- Oriented for easier printing.
- FreeCAD files so you can change the sizes and features to meet your needs. The holes are designed in such a way it should be very easy to adjust to different standard screw sizes or styles,
