Summary

Ebike motor chain guard

[Sports & Outdoor](#) > [Outdoor Sports](#)

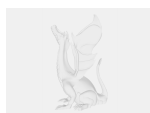

I made this chainguard to keep my chain from getting stuck between my chainring and motor.

I've been using it since 2021 and it's held up really well.

It is held on my the stock motor case bolts.

It was modeled around my frame and battery, but I've included a cad file so anyone can edit it to suit their bike.
