Summary

This is a basic tape dispenser using the Fusion 360 shape automated shape generator as a start point.

This is a basic tape dispenser using the Fusion 360 shape automation tool(and some manual tweaking afterwards).

I have use the tape that I modelled in my T-Rex tape dispenser a long time ago as a start. I use the same tape support core piece here as well. <https://www.printables.com/model/38723-t-rex-tape-dispenser>

The Core is designed to be assembled with the cylinder being inserted, chamfered end first into the recess in the main core body to complete it.

This minor step means that they can be printed without supports.

I am printing this now and will upload some pictures when it is done.
