Simple charging stand for the Fitbit Charge 5. The original charger is put into the stand from the top and will stay in place there. The watch clicks into place and is hold there by the magnets of the charger.

The stand can be printed without support and was designed for 0.4 mm nozzles. It prints fine with 0.2 mm layer height. A smaller height will give you a smoother surface. I would suggest to use a higher infill density than actually required (> 50%) to get some additional weight and make the stand steadier.
