Summary

A simple small part that prevents the edges of the lenses to get scratched from laying the phone on the table.

Tags: [nothingphone](#) [lensprotector](#)

This model is meant to simply press fit on to the protruding lens assembly of the nothing phone (1).

Some light scraping of the inner diameters might be necessary for a good fit.

If too loose a bit of thin double sided tape can also be used.

In the photo the scratches are easily visible.
