Summary

Flexible mount for smartphone

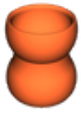

[Gadgets](#) > [Photo & Video](#)

Want to use your smartphone as a camera, perhaps in a confined space? This mount is for clamping onto a shelf or some such, with a flexible Loc-Line neck to help you get that framing just right...

Just the Loc-Line joints aren't rigid enough to hold the weight, though - you need to insert a 5mm aluminum armature wire "spine". Also, you need to fixate the spine or the whole arm will simply rotate under gravity. The base & head holes are smaller for this reason but I still recommend a glob of superglue in those holes when you assemble the whole thing.

I've included a phone holder (with a "cold shoe" for a shotgun mic, light or whatever) which probably doesn't fit your phone. It should be fairly easy to bring the file into your 3D app of choice and do whatever modifications are needed.
