Print with a brim.

added a wing to the model to help with turning

*added a zip tie slot *

works with the s1 pro but can't be screw down. this was verified by another user

This should fix the issue with the heated bed wires from flexing over and rubbing on the motor.

Installation notes.

- 1-remove the screw right under the bed wire that s fastening the bottom cover.
- 2-pull the bed all the way to the **front**.

- 3-install the support bracket.

please leave review and rate.
