Summary

A simple model for dense display of acrylic standees

[Household](#) > [Home Decor](#)

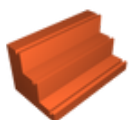

I designed this to allow displaying vtuber standees with a much smaller footprint than with the included bases.

The STL files display 3 rows of them with 2cm steps between each row. I sized the slots to 3mm which works for the new Phase Connect standees.

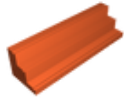

You can use the scad file in OpenSCAD to customize the display to your needs if your standees are different thicknesses, or you want to change the number of rows and how they're spaced.

Added V1.1 of the OpenSCAD file that allows each tier to be a different width for handling multiple kinds of standee.
