**Perfect for a last minute Xmas gift, or for the man or woman who has everything, I'm pretty sure they don't have one of these!**

[17-05-2017] Updated to support up to 8 Customizable Characters

Customizable Text Keyring, make one for your significant other! show them that the expense is justified after all!

Uses the recently added openSCAD text() function, which allows the use of almost any regular font.

The font used in the pictures is called “Chewy” if you don't have it you can download it for free from Google Fonts here

<https://fonts.google.com/specimen/Chewy?query=chewy>

Windows users remember to install fonts **for all users**

This is a new version of my widely used Keyring Customizer mostly to simply the adjustments to character spacing and height, as it now uses slide bars, it is however limited to 6 characters at the moment, if you require more characters use the previous v1 found here :-

<http://www.thingiverse.com/thing:834725>

## Print Settings

### Printer Brand:

RepRap

### Printer:

Ormerod

### Rafts:

Doesn't Matter

### Supports:

Doesn't Matter

### Resolution:

0.2

### Infill:

20%

## How I Designed This

Uses the recently added **openSCAD** text() function, which allows the use of almost any regular TTF/WOFF font.

Download and easily customize with openSCAD downloadable free from here

<https://openscad.org/downloads.html>

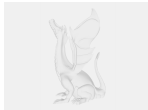

## Custom Section

### Instructions

1. Choose a Font
2. Enter the text you want with  $\leq 6$  letters (or use the older version thing:834725)
3. Use the sliders to adjust the spacing of the characters so they touch each other.
4. Use the sliders to adjust the height of each letter, this helps to define each letters outline
5. Tweak the twist and center as desired.
6. Use the sliders to adjust the key loop position so it is touching the first or last letter.
7. Spin it round and check it over with the Rotation slider,

Category: Keychains
