Using @jentry's Pi TFT50 bracket as a base I created a top mount for the Voron Trident/1.8/2.4/Legacy series. This makes the display much easier to view and interact with if like me your Voron is on a table that's waist height. It doubles as an extra clip for the top panel.

Secure in place with M3 screws and T-Nuts that you probably have laying around from building your Voron ;)

Please post your makes! You get prusameters and it shows me I did something good!
