We have designed a simple holder to keep HEX BIT together , so we'll share information.

We can take out 5 pieces individually as a set and put them upright as a block in 2-5 rows.

It is recommended to manufacture with a resin with a certain degree of stickiness such as ABS and PETG, and it is recommended to carry out test printing to improve the dimensional accuracy before making a prototype.

HEX BIT	5	1	2-5
ABS PETG
