Summary

Sized to be same as the hexagonal habitat tiles so fits in storage. PLUS pinecone tray.

Sized to be same as the hexagonal habitat tiles so fits in storage. I made it so that could easily swap out the filament for the text when printing at 0.20mm layer height (remembering that first layer is 0.30mm). Fits in the hex storage insert.

Additional: hexagonal pine cone tray that fits inside gexgecko's starter tiles holder. I'm using small magnets on the inside to keep a group of 3 trays together under the starter tiles.
