Tags: wanhao

---

Improves the cooling for psu on the wanhao duplicator 6 by sucking in air from outside the printer. This reduces recirculation of warm air.

Fits a 2.125" hole or 53-55mm diameter hole

I performed a similar treatment with intaking air to the mobo. Minus a duct.

Printed with flex PLA for a snug fit. Scale up to account for material shrinkage. Print in vase mode 1mm and 0.4mm nozzle. Yes 1mm wide works.
