Summary

I saw the Cooler Master show off a new case, and the cut-out design on it was very interesting, and I remixed this

[3D Printers](#) > [Accessories](#)

Tags: [bambulab](#) [spool](#) [bambu](#) [filament](#)

Spool

I followed Bambu Lab's STL archive to remodel in 3D and then worked on Cooler Master's design with other creators' Spools Combination of cut-out designs.

label

I created a replaceable label, I designed it according to the sticker of Bambu Lab, but I found that the spool sold by Bambu Lab did not match the label position of the STL file, which could lead to a gap of 50~100g. Therefore, I recommend reducing the gap by not using refills.

The label recommends that the first layer be printed with a width of 0.4mm to improve the clarity of the text.

There are several versions of label, if you don't have the one you need, you can download a blank version to modify.

I have gained a lot in this community and hope that I can also contribute some of my strength.
