Summary

Used for outdoor spotlights with 3/4" opening for the spike in the bottom.

[Household](#) > [Outdoor & Garden](#)

This spike can be used to replace the ground spike on outdoor spotlights. The OD of the part that inserts into the bottom of the light housing is just under 3/4 in. Use outdoor stable filament and print with supports on it's side. Added a slightly smaller diameter version for those in need of a fit that is more loose. Alternately, using a heat gun to soften either the spike or the light base can get a tight fit to work.
