The Tool-Holder can fit the following tools:

- The 5 Allen-Keys that come with the printer
- The 2 Screwdrivers that come with the printer
- The 2 Wrenches that come with the printer
- The Micro-SD to USB adapter that comes with the printer
- The wirecutter that comes with the printer
- Small additions like filament clips or spare nozzles can be kept in the drawer
- The hole at one side can be used to mount a tool clip holding for example a de-brimming tool

(I first used this clip: <https://www.printables.com/model/88783-tool-holder-clip> together with a screw and nut. Just resize it to whatever tool you need and either model in a hole or drill one later).

You can also use my designed deburring-tool holder for this:

<https://www.printables.com/model/525791-deburring-tool-holder>

To attach the Tool-Holder to your printer just unscrew the 2 screws at the front (like shown on the image) and push the hooks into the rail. Because the hooks are small it's not necessary to remove the whole front cover. Let me know what you think of this model and feel free to message me if you have questions :)

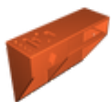

This remix is based on

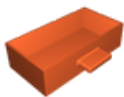

ELEGOO Neptune 3 Plus Tools rack may fit others.
