Summary

This part makes it easy to drill a hole that's perfectly centered in the cell. No locking tabs for easy removal.

[Household](#) > [Other House Equipment](#)

I'm just starting to mount my Honeycomb Storage Wall. I wanted a way to easily drill a hole that's centered in the hex for the mounting screw.

This drilling jig is meant to go into the cell that needs a screw hole to be drilled, you drill through it, then remove the jig (it **does not have locking tabs so it's easy to remove**). Then I push in the drywall anchor, then put in the mounting fastener part and screw that into the anchor.
