Summary

Y-Splitter with 3x6 mm magnets

[3D Printers](#) > [Other Printer Parts & Upgrades](#)

This is a remix that uses 3x6 mm magnets as a connection to the printer backside.

You will need 2 magnets.

The tolerances allow the magnets to be press fitted without glue.

The screw hole is still accessible, if you decide to screw it into the backside.

This remix is based on

Bambu Lab Over-Engineered Y-Splitter

by Brandon Raineri
