Hi everyone,

Looking different sizes? Check my upgraded version of [v. 2 Pixel Box project!](#)

Unleash your creativity and express yourself. Create texts or even pixel old characters by putting pixels in the grid - SIMPLE!

TIP: Use glowing filament and create different effect at night

Pixel box with 12x30 pixels grid.

Contain most of the pixels singular words with 4x3 or 3x3 letters.

Looking inspiration? Just search: “pixel text”, “pixel on grid” or “pixel illustration” and bring it to your reality, directly to your desk.

You can use bolt: 2xM3 30mm and 2M3 16 mm, they are not necessary.
Grid fit well without it.

Box stand well on the slightly angled legs after connect with grid. Full part have ballance between legs and front weight. Dont scare if box turn over, just install second part:)

Pixels fit perfectly. Print it as in the file. Just duplicate it as more as you want. I prefer 80-100 on the beginning of your journey. Use different colors to create something more personal.

If any pixels won't get out, just open the box and push them out from the inside using special pixel legs :).

Share your ideas and let me know if you want more boxes like square 20x20 or more!

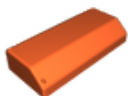

Thank You.

Thank you for a lot of ideas, comments, feedback and downloads. Check my upgraded version of v.2 Pixel Box project!

If you like what im creating, just let me know im doing good job and should keep moving.
