[building](#) [house](#)

This model is inspired by the Elbarkaden in Hamburgs Hafencity. The footprint is 300x150mm and it's 170mm tall. All walls are split into sections that are assembled by fitting and glueing the taps. All wall sections need to be printed once, the parts with NG in the name make up the left half of the building. There's lots of windows to print (I'm not gonna list it all here), parts with Erd in the name are groundfloor shop windows.
