Summary

I hope you like this model of a Star wars Droideka. That took me a long time to make, but the time was worth it.

Printing:

Layer height: **0.15**

Supports: **Yes**

Material: **PLA, PETG, ABS...**

I recommend printing the first two layers more slowly.

Assembly:

The assembly is relatively straight forward.

First assemble the center with the cube.

Then assemble the legs and put them in the holes.

Put the belt on the back of the center.

After that put the body piece together and place it on the center.

Then attach the head and stabilize it with the connectors.

Finally put the arms together and put them on.

For more stability I used some super glue at all connection points.
