### Summary

Storage box for Nintendo Switch

[3D Printers](#) > [Accessories](#)

Tags: [nintendo](#) [gaming](#) [storagebox](#) [pixel](#)

This was a long term project! I wanted to make a multicolor pixel art without multicolor 3D printer. So I designed a system, which allows you to put every pixel by itself. If you don't like your picture anymore you can just change it!

You can store up to 8 Nintendo Switch games in this box.

The box has 1150 pixels - so it takes some time to print it. It's not easy to print: You need to have a perfect leveled print bed. Play around with printing settings like speed, flow rate and retraction speed and avoid elephant food. I would not print too much pixel at once because if one of it come off the print bed, it will crush into others.

So this model is a challenge but it's worth it:-)
