## Summary

Customise your V1 Engineering LowRider CNC machines with one of these name badges or download files to engrave your own.

Here are a couple of simple badges you can use to decorate your V1 Engineering LowRider3 CNC machine, or your wife (or husband's) car or just print two layers and make them a bookmark!

Both STL's are 200 mm wide, but the "Outlined 3" version pictured has been scaled down in the slicer to about half that.

If you are scaling down, you may wish to print in smaller layer heights than normal to ensure a nice finish and enough layers over any colour change you wish to incorporate.

Also included are the original .dxf and .svg files so you can modify them to your heart's content, use them for cnc engraving or laser cutting. I've printed these in Prusament Galaxy Black, Silver and Azure PLA and

coated them with about five coats of clear acrylic to give them a rich enamelled look.

## Model files

**Ir3badge.dxf**

**lowrider3-badge\_outlined-lowrider.stl**

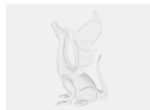

☐ This badge does not scale well

**lowrider3-badge\_outlined-3.stl**

☐ Use this to make a small badge.
