Hi,

I made a weight distribution for the car tire holder to avoid pushing in one place for my 195/65 R15 tires.

My tires holder is made from 20x20mm steel square tube.

The model is very strong, it just needs to be clipped onto the 20x20mm steel square tube :-)

I am using PLA for this model.

Printed on old MK2S with 0.6 nozzle for 2 hours:

Layer 0.35mm, 30% infill, Brim and no supports.
