The brake pedal stopper pad may deteriorate over time, allowing the stop lamp switch plunger to remain extended when the brake pedal is released. A deteriorated pad can result in the continuous illumination of the stop lamps.

In order to solve what the new one came to me, I designed and printed it. The new one is still in reserve since the one I printed is still working. :D

Print instructions

Filament: PLA
Infill: 100% (solid)
Filament Temp: 206 oC
Bed Temp: 60 oC
Speed: 40 mm/s
