### Summary

Chain link to raise the chain high enough so it doesn't hit the underside of the creality K1 speedbump riser.

Use this in combination with the speedbump riser that you can download [here](#):

<https://www.printables.com/model/536359-creality-k1-riser-the-speedbump-closed-and-ventila>

Printed in ABS supports are needed and you can use the standard bolt holding the old link to the extruder head.

Removing the old link will involve removing the cable from the toolhead or you can do like i did and just snip away some pieces so you can remove it without disassembly (please do under own risk of damage as there is no turning back from this)
