I needed a little spoon for measuring tiny volumes, such as putting sweetener in coffee and getting single saccharine tablets out of a packet, which it does excellently.

The fat part with a hole in it is for your thumb, and that hole in it is for it to be able to hang off stuff.

As this is being used with food potentially, treat it as a single use object and throw it away after usage.

Useful for measuring and mixing paint. Useful for making spice mixes when only a very small amount is needed. A tiny addition of MSG can bring out a lot of flavour.

The volume of the spoon part is about 0.03 cubic cm.
